

COLUMBIA ParCar **ARIZONA**

ATTENTION SEASONAL RESIDENTS

Battery Maintenance Before You Go

- 1** Make sure the batteries on your cart are fully charged.
- 2** Once charged, fill with distilled water to proper level and reinstall all cap covers.
- 3** Verify the battery tops are clean. If not, clean with mixture of baking soda and water. Clean in outdoor area where any runoff of battery acid residue will not cause damage.
- 4** The Columbia ParCar is equipped with an on-board smart charger. It will test your batteries periodically and charge if needed. **The charger must be kept plugged in.**
- 5** Keep seats raised and batteries exposed to provide adequate ventilation and air flow.
- 6** Have a safe, wonderful summer with your friends and family!

Note: Due to variations in conditions of batteries, and the extended time some vehicles are placed in storage, some batteries may require more water than others. We recommend two options:

A. Have a friend, neighbor or family member periodically check water levels in your batteries. The battery plates must NEVER be exposed to air. If low on water, un-plug charger, add distilled water to cover plates, plug back in until the green battery charger indicator show full charge. Then, fill all batteries to proper water level.

B. Second option, purchase a Battery Minder through your dealer. The Battery Minder will keep a constant trickle charge to the battery pack and reduce the consumption rate of water. To use the Battery Minder, follow steps 1 thru 3 above using the on-board charger. Once charged, unplug the on-board charger and plug in the Battery Minder and it will do the rest.

Battery Maintenance When You Return

- 1 Welcome back. If the Battery Minder was used while gone, un-plug it from the wall and cart. Verify the water level in each battery is at a minimum covering all the plates.
- 2 Plug in the on-board charger to the AC power outlet and allow the batteries to complete a full charge cycle.
- 3 Once a full charge is indicated, disconnect charger and check all batteries for proper water level. If low, top off as needed.
- 4 Inspect cables making sure no corrosion is present and all connections are tight.
- 5 You are now ready to cruise!

Have questions about what to do before you leave or when you return?
